CONFIDENTIAL EVALUATION DOSSIER

Animus Project — Technical Brief & Budget Allocation

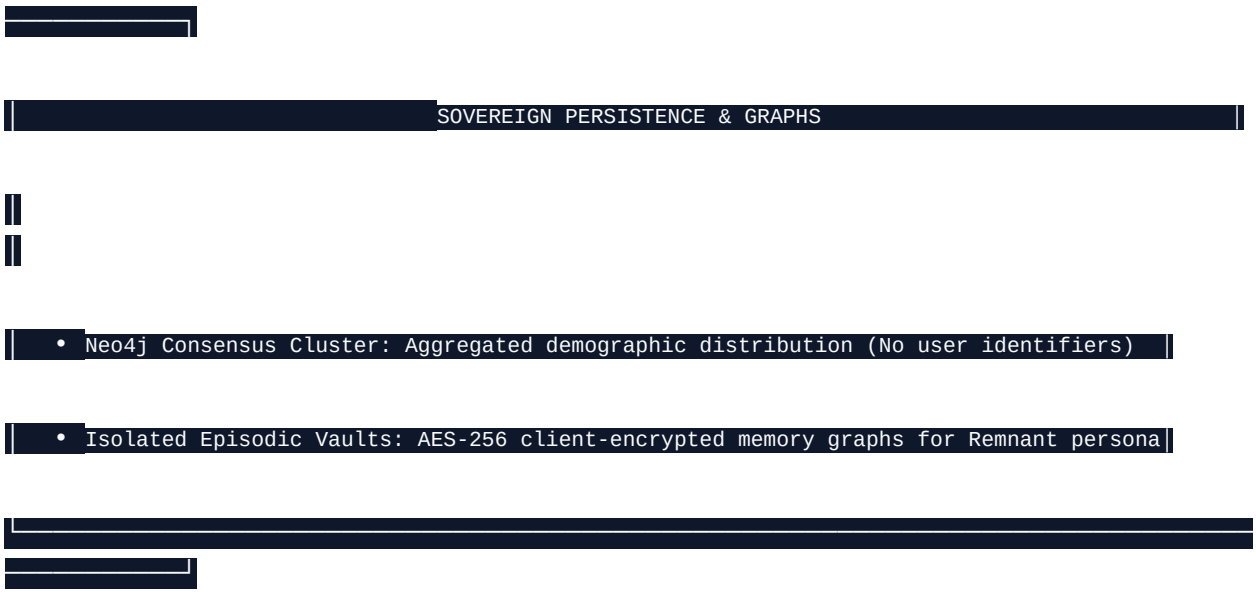

Prepared Exclusively for the Mozilla Technology Fund Selection Committee

Applicant:	Animus Project LLC (Florida, USA)
Principals:	Javier (CEO / US Operations) · Leo (CTO / Lead Architect)
Legal Classification:	Proprietary & Confidential under DTSA, Florida UTSA & 18 U.S.C. § 1905
Portal:	animusproject.org/review
Direct Contact:	review@animusproject.org
Grant Track:	Mozilla Technology Fund — Sovereign Open Source Ecosystems

1. HIGH-LEVEL BLOCK ARCHITECTURE (PROPRIETARY SOURCE CODE ISOLATED)

The Animus ecosystem decouples public human consensus from private memory vaults through a three-layer sovereign architecture. All computations adhere to zero-telemetry and commit-to-unlock cryptographic invariants.

CLIENT TIER (ZERO-TELEMETRY)
[Animus Mobile/Web]
[Remnant Voice/HUD]
[Resonance Match Layer]
• Blind Vote Commitment
• Moonshine Local STT
• >90% Axiological Affinity
• Local Reciprocity Ledger
• Kokoro Neural TTS
• 4-Phase Double-Blind Gate
TLS 1.3 / Ephemeral HMAC Token
CONSENSUS & COMPUTATION MIDDLEWARE
• Commit-to-Unlock Gatekeeper: Blocks aggregate results until proof of vote committed
• Deduplication Engine: Semantic clustering of micro-dilemmas without PII association
• Voice Synthesis Gateway: Dispatches neural speech jobs to isolated GPU workers

> **Core Architectural Invariant:** At no point can vote distributions be queried prior to commitment. Neo4j persistence records exclusively aggregated topological weights and demographic attributes, making reverse voter identification mathematically impossible.

2. PHASED DEVELOPMENT MILESTONES

MILESTONE	TIMELINE	TARGET DELIVERABLES	SUCCESS VERIFICATION METRIC
Milestone 1: Private Alpha	Months 1 – 2	Three functional client prototypes (Animus, Resonance, Remnant). Local Moonshine STT and lightweight Kokoro TTS integration. Initial Neo4j cluster.	End-to-end commit-to-unlock operational; sub-500ms graph aggregation latency under 1,000 concurrent dilemma queries.
Milestone 2: Dedicated GPU Migration & Security Audit	Months 3 – 5	Deploy dedicated GPU inference cluster (NVIDIA L4/A10G) for real-time Kokoro TTS & Moonshine STT; independent cryptography & zero-telemetry audit.	Voice synthesis round-trip latency <180ms; zero third-party trackers detected via Wireshark and mitmproxy package inspection.
Milestone 3: Controlled Cohort Rollout	Months 6 – 8	Onboarding of 5,000 active evaluators across diverse regional, age, and philosophical	Consensus accuracy >99% against duplicate dilemma injection; >90% resonance

MILESTONE	TIMELINE	TARGET DELIVERABLES	SUCCESS VERIFICATION METRIC
		demographics. Stress test of reciprocity token ledger.	affinity retention without superficial profiles.
Milestone 4: Mainnet & Sovereign Federation	Months 9 – 12	Production deployment of federated nodes; official release on open repositories (F-Droid, GitHub) and audited app stores.	Autonomous decentralized consensus operation; verified zero PII leakage under strict GDPR/CCPA criteria.

3. DETAILED GRANT BUDGET ALLOCATION ($50,000 USD)

The requested Mozilla Technology Fund grant is allocated strictly toward critical infrastructure bottlenecks, intellectual property formalization, and demographic testing cohorts. Every dollar is tracked against concrete engineering deliverables.

CATEGORY	ENGINEERING SCOPE & ITEMIZATION	PERIOD	ALLOCATION
Dedicated GPU Inference Infrastructure	Provisioning of dedicated GPU compute instances (e.g., 2x NVIDIA L4 / A10G instances) dedicated to real-time Kokoro TTS neural voice generation and low-latency Moonshine STT speech recognition, eliminating prototype queue delays.	12 Months	**$24,000**
Neo4j Enterprise Consensus Graph Cluster	Neo4j Aura Enterprise dedicated clustering for high-availability semantic dilemma deduplication, real-time demographic cross-referencing, and multi-region consensus replication.	12 Months	**$12,000**
Trademark & IP Formalization	Legal filing fees and formal registration of core brand trademarks with the United States Patent and Trademark Office (USPTO): ANIMUS™, RESONANCE™, and REMNANT™, under Animus Project LLC (Florida).	One-time	**$6,000**

CATEGORY	ENGINEERING SCOPE & ITEMIZATION	PERIOD	ALLOCATION
Audited Testing Cohorts & Verification	Incentive pool, demographic verification services, and security auditing for the 5,000-user private alpha/beta testing cohort, ensuring diverse geographic and viewpoint representation without capturing PII.	6 Months	**$8,000**
TOTAL REQUESTED GRANT BUDGET			**$50,000**

> **Hardware Justification:** The Remnant voice agent currently operates with Moonshine STT and Kokoro TTS on an unaccelerated zero-cost tier. While this validates functional determinism, the noticeable latency directly demonstrates why dedicated GPU acceleration ($24,000 allocation) is essential for real-world adoption.

4. DIRECT FOUNDERS CHANNEL & COMMITTEE VERIFICATION

The founders of Animus Project LLC maintain an open communication channel exclusively for members of the Mozilla Technology Fund Selection Committee during the review period. We are prepared to schedule live architectural walkthroughs, provide sandboxed testing APKs, or furnish audited network captures upon request.
